

LX2 HPA

„If you really want to play the fun factor - there's plenty of pressure here!“

For a manageable 300 euros you buy a friend. It sounds much better than many headphone jacks we know from preamplifiers or players. **A clear gain.** Above all, the enormous noise distance was convincing. Even at high levels, no disturbing background noise crept in. The LX2 HPA is just 17 centimetres wide, with input/output loop it fits into any existing hi-fi rack. **The sonic gain is handsome**, a whole new control and joy of playing sets in.
